

May 19 Noon to 1pm

Colorado River Discovery
130 6th Ave, Page, AZ

Meet Astronomer Dr. Tyler Nordgren

Tyler Nordgren is an accomplished astrophotographer, astronomer, scholar, and artist, who continues to be involved in scientific research and outreach doing what he loves best- astronomy, and going where he loves to find dark skies- National Parks.

With the growth of cities, a dark starry sky is now as rare a sight as gorges, geysers and grizzly bears. The natural wonders that our national parks protect by day, also preserves the natural star-filled beauty of the sky by night. Half the park is after dark: Come for the canyons; stay for the Universe.

Note: The Glen Canyon Astronomy Team will have several solar telescopes set up to view the Sun at the same time and location.
